18/06/2012	

Description:

The experimentation of this service can be divided into two parts, one related to the use of the wiki itself and another one related to its content.

Regarding the experimentation of the wiki itself we found limited support in terms of text formatting.

For example, we could not include a reference section to gather all references included in the text.

Conclusions:

- Regarding the content itself, we think this should include two parts, one giving details to the component itself and another one providing information about the role played of this component into the project.
 - Regarding the information of the content itself, we think that the wiki should provide information such as history project, versioning, component requirements, tutorials, etc. In addition, whenever possible the text should include links to wiki pages describing specific terms used in it.
 - On the other hand, it should also be very interesting to position the component within the OPEES project giving information about what Polarsys members can expect from this it. In addition, when the component can be used for several domains, if there are differences of use between domains, this should be highlighted.
- Regarding the formatting of the pages, if the content is not too long we would suggest to use just one page per component.
