

BPMN Modeler Project Move Review from STP to SOA

The Eclipse logo features the word "eclipse" in a white, lowercase, sans-serif font. The text is centered over a dark, circular, 3D-rendered sphere that has a bright white highlight on its upper-left edge. Three horizontal white lines pass through the sphere and the text, creating a lens flare effect. The background is a dark blue gradient with faint, concentric circles.

Planned Review Date: April 28th 2010

BPMN Modeler Overview

The BPMN modeler is a graphical editor to model Business Process Modeling Notation (BPMN) diagrams compatible with the BPMN 1.2 specification from the Object Management Group.

Reasons for Move

- The new SOA top level project (formerly SOA Tools project) is a better home for BPMN modeler because
 - the SOA project aims to be the home for all Service Oriented Architecture (SOA) relevant projects.
 - alignment with the runtime related projects will be easier
 - we should reach to a broader audience this way.

Project Structure

- The BPMN modeler project becomes a subproject under the Eclipse SOA top level project
- The committers and the rights remain the same as the whole project moves.
- No changes in the overall BPMN modeler project structure

Move Plan

- SVN: BPMN Modeler SVN is currently moving to git. No changes should intervene there.
- Newsgroup: No need to change *news.eclipse.bpmn-modeler*
- Mailing List(s): No need to change *bpmn-dev*
- Bugzilla: Change the classification for bugs with product = BPMN from STP to SOA
- Web site: No changes necessary

PMC Approvals, Project Plan and IP log

⑩ Approval from STP PMC to leave

<http://dev.eclipse.org/mhonarc/lists/stp-pmc/msg00514.html>

⑩ Approval from SOA PMC to join

<http://dev.eclipse.org/mhonarc/lists/soa-pmc/msg00084.html>

⑩ The current project plan for BPMN Modeler 1.2 is available at
