----- "Works with" Third Party Dependencies -----

Documented at: <http://wiki.eclipse.org/Mylyn/Discovery>

The inclusion of Mylyn connector dependencies follow the mechanisms of the Web Tools Platform's [http://www.eclipse.org/webtools/iprelated/2008dependencies.php Server Adapter install] and re based on the the ability to include [http://www.eclipse.org/org/documents/Eclipse_Policy_and_Procedure_for_3rd_Party_Dependencies_Final.pdf works with dependencies] with Eclipse. Note that third party connectors are not distributed with Mylyn

Mylyn does not require the third party connector software to be present and functions with multiple third party connectors present. The following connector kinds are supported. Three kinds of connector dependencies are supported.

- * "Task Repository Connectors": provide Task List and Task Editor integration for accessing a task/bug/issue management system.
- * "Document Bridges": provide focusing features to programming and other document management tools.
- * "Version Control": provide automatic change set management for source and version control systems.

The following reference implementations of connectors are distributed with Mylyn:

- * "Task Repository Connectors": Mozilla Bugzilla and Trac
- * "Document Bridges": Eclipse JDT and PDE
- * "Version Control": Eclipse CVS
