Section 1: Committers

The following table shows the list of all TPTP committers, and their access permissions to TPTP resources. There are 7 access groups, each controls write access to CVS modules, website and download site.

tptp-platform controls access to /cvsroot/tptp:platform, /cvsroot/org.eclipse:www/tptp/platform

tptp-test controls access to /cvsroot/tptp:test, /cvsroot/org.eclipse:www/tptp/test

tptp-trace controls access to /cvsroot/tptp:trace, /cvsroot/org.eclipse:www/tptp/trace

tptp-test-result controls access to /cvsroot/tptp:test-results

tptp-home controls access to /cvsroot/org.eclipse:www/tptp

tptp-main controls access to the download site

✓ means that the person has committer access to the CVS module named in the column.

✗ means that the person does not need committer access to the CVS module named in the column.

Guid.java	Guid.java was originally an implementation of the IETF GUID specification (http://ftp.ics.uci.edu/pub/ietf/webdav/uuid-guid/draft-leach-uuids-guids-01.txt) but has since been modified completely (<40% code based on specification). The IETF GUID specification does not contain any source code.	always been in TPTP	There is more than one copy of Guid.java in TPTP. Ask all of the people listed below: • Cindy Jin • Marius Slavescu
• org.eclipse.hyades.logging.core/schema/cbe.xsd • org.eclipse.hyades.logging.core/src/events/commonbaseevent1_0_1.xsd	We ship the Common Base Event v1.0.1 schema from the Common Base Event v1.0.1 specification (OASIS).	always been in TPTP	Paul Slauenwhite
