

***SOC Project
JDTConcurrency Component
Archival Review***

Planned Review Date: February 25/2009

Communcation Channel:

news.eclipse.org/eclipse.technology.soc

Wayne Beaton, The Eclipse Foundation

Introduction

- The main idea of this project is not to solve concurrency problems but to help the developer to concentrate on the real hard things and eliminate the machine-solvable problems
- The JDTConcurrency component is considered successful, but has reached a natural end of life

JDTConcurrency Archival

- JDT concurrency can be archived for now as most of the work is integrated in JDT or going through review processes

Committers

- Two committers on this component:
 - Benjamin Muskalla
 - Ahti Kitsik (Mentor)
- These committers are still valuable contributors to the SOC project and will **not** be decommissioned

Termination Plan

- The component has reached a natural end of life
- Relevant code has been—or is in the process of being—moved to the JDT project
- The component will be terminated
 - Contents of CVS subtree to be archived
- The SOC project will persist

Archive

- The JDTConcurrency component from the technology.soc tree will be archived
- No web site archival is required
- No Bugzilla component archival is required
- No newsgroup archival is required
- No mailing archival is required
